

ABSTRACT

A logo generating system and method allow a user to specify colors and adjust an image according to the particular printing purpose. Source data of image elements with two or more colors is obtained and displayed so that the user can view an image of the source data while freely adjusting the colors of the logo data according to the colors that can be used by the printer. The source data is processed and output according to the input parameters as the colors are assigned. An image of the data processed according to the color assignments is also displayed so that the user can adjust the color assignments while viewing the effect on the actual data.
